

Always power off the fence energizer and confirm the line is safe to touch before mounting, cabling, or handling the fence wire.

Never power on the device without connecting the antenna first, as this will damage the device.

WHAT'S IN THE BOX - PER FENCE SHIELD

1× Fence Shield

2× Fence cables

2× Zip Ties

1× Antenna

GETTING YOUR DEVICE ONLINE

1

Register the device on your LNS

Using your own LNS? Register the device on it first. See the full guide via the QR code.

2

Connect the antenna and check signal

Connect the antenna, then press the button on the outside to turn the device on. Before mounting, confirm the LED blinks green slowly (see LED status indicators).

3

Mount the unit

Use the supplied UV-proof zip ties to fix the unit to a fence post, or metal wire (not supplied) as alternative. See Critical mounting tips.

4

Connect the fence cables

With the energizer switched off, connect the two supplied cables between the Fence Shield and the fence wire, as shown in Critical mounting tips.

5

Confirm on the dashboard

Confirm the device appears with live readings on the Safora dashboard.

CRITICAL MOUNTING TIPS

Panel upwards, no shade

Orient the solar panel upward and keep it clear of shade.

Mount rigidly

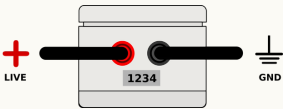

Fix the unit so it cannot move or vibrate

Mount high, check signal first

Mount as high as practical. Confirm a slow-blinking green LED.

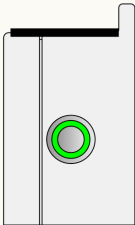

Ensure the fence cables are connected as follows:

LED STATUS INDICATORS

LED	MEANING
 Turquoise	LoRaWAN connection & sending
 Blue	Measuring fence voltage
 Green, slow blinking	LoRaWAN success
 Red, slow blinking	LoRaWAN failure

LED turns off after the first few cycles to save power. More LED color details are on the wiki.
